

READY FOR THE FUTURE

By constantly investing in knowhow and equipment, Walk has evolved into a respected partner in drive technology that is ready for the future.

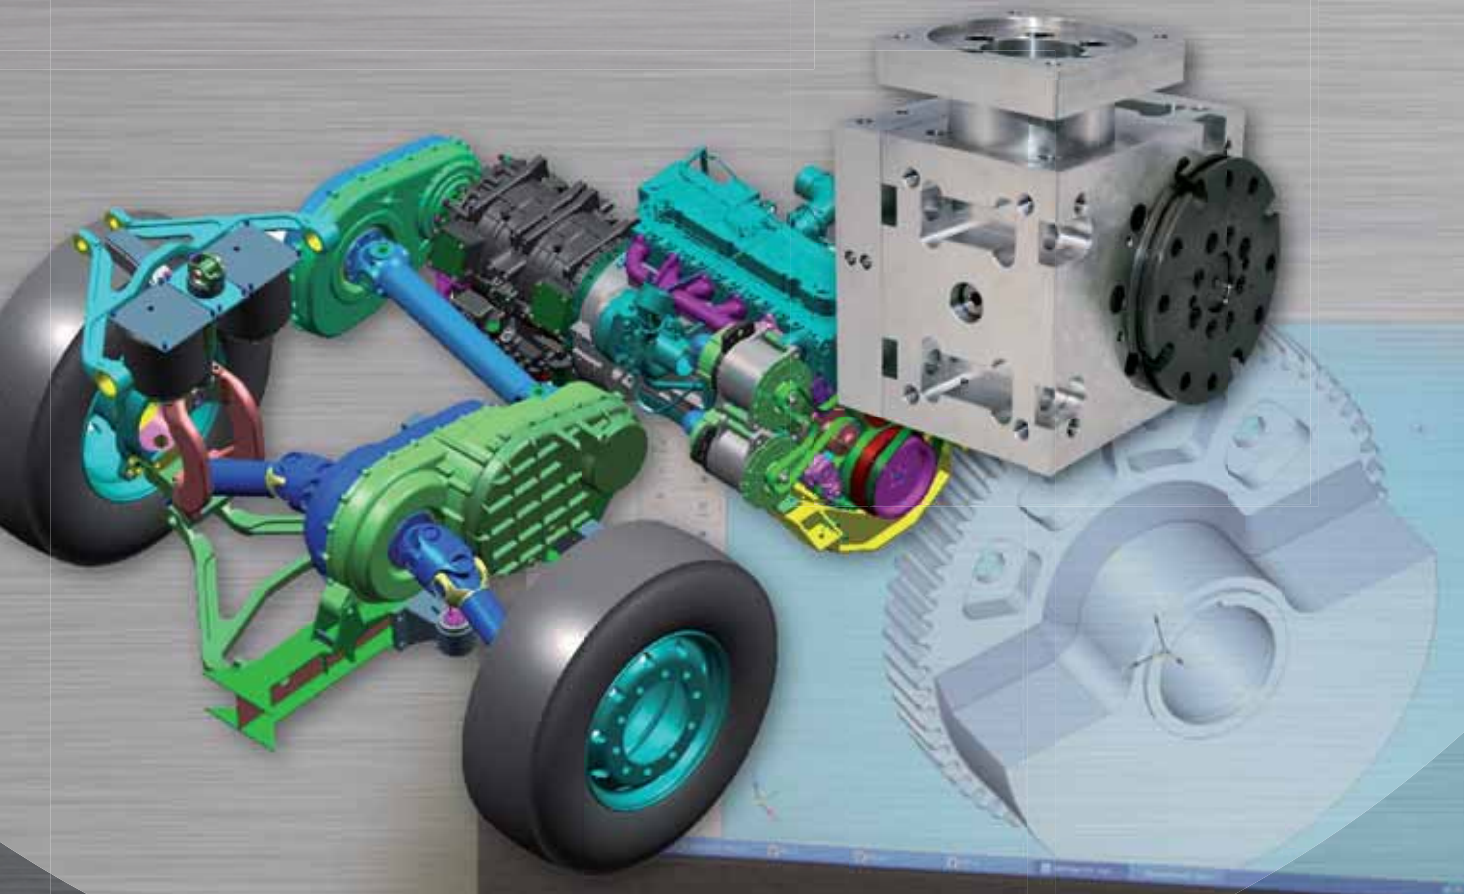

The fact that complex assemblies are forming an increasingly large part of our product range reflects our company ambition and the confidence that clients have in us.

We also carry out extremely complicated and precise work including internal gears, grinding of worms and hardened gear wheels to quality 4.

Obviously, you can also come to us simply for gear hobbing, assemblies parts and complete gearboxes. We also offer our partners cooperation in the field of stock management and Research & Development. All of our mechanical drive components and assemblies are destined for the mechanical engineering sector and professional trade channels in Europe. From there, they are distributed to many other countries worldwide.

ENGINEERING

Here too partnership and confidence are essential. All aspects of the drive process need to be detailed in order to guarantee optimum quality of components. That requires consultation and the exchange of knowhow. Walk has considerable experience in engineering. By designing in a 3D environment on the basis of the original document and applying advanced calculation programmes for spurs and helical gears, worm wheels, bevel gears wheels and sprockets in combination with state of the art machines, including a CNC-driven five-axis gear hobbing machine, we offer an exceptionally versatile and high quality production, with this tolerances can be minimised.

*Our standard
is special*

Our standard is special

Over the years, Walk Aandrijftechniek has evolved into an internationally recognised specialist in mechanical drive components and we supply to large and small clients worldwide. Walk Aandrijftechniek has a high quality project organisation and works in one of two ways:

The development and manufacture of:

COMPLEX ASSEMBLIES / MODULES

Aimed at low to medium-sized production quantities. Walk offers its clients the opportunity to introduce improvements and cost reductions to their existing and new products.

The supply and machining of:

DRIVE COMPONENTS, STANDARD OR SPECIALS

Both one-off manufacture and serial products according to every desired specification and in all possible forms, gear design and materials.

The business is propelled by knowledge, technology, quality and continuity. In every project we act in the first instance as consultants and advisors and, together with our clients, we endeavour to define the actual requirement as closely as possible.

The completion of the project is in the safe hands of our experts, supported by advanced software such as a fully automated production administration, powerful 3D CAD-CAM design systems, software for strength and durability calculations, high quality measurement equipment, and versatile and modern machinery.

Whether we are talking about a standard product, a special adaptation, a machining process or a complicated assembly with several drive components, Walk manages and directs all technological aspects and where necessary, selects the most suitable suppliers.

By constantly investing in knowhow, technical market developments and equipment, Walk is the obvious partner when it comes to drive technology.

Many clients contract these specific activities out to Walk so that they are freed up to focus on their own product development and innovation.

A PARTNER TO RELY ON

Walk Aandrijftechniek aims to build solid partnership with its clients based on the belief that long-term relationships benefit all parties. Mutual trust is first precedence. Naturally, we are well aware of the importance of continuity for your business. The well-known saying that the chain is as strong as its weakest link is very apt when applied to partnership. With Walk you can always depend on the quality that suits you, a professional organisation and accurate drive mechanisms.

WELCOME TO WALK

The Walk Aandrijftechniek team is at your service. You can depend upon a pleasant, efficient and, above all, an effective cooperation. We would like to invite you to visit our website www.walk.nl. Feel free to email, call or fax us to arrange a preliminary conversation or a visit to our factory.

As a fellow professional, we offer you a warm welcome.

Thanks to our numerous international contacts, we can also advise you about sourcing and evaluating good quality foreign products. Our business premises is situated along the A77 motorway in Gennepe, North Limburg. This strategic location guarantees a swift connection with the nearby major West European industrial centres.

RELIABLE DELIVERY AND QUALITY

Reliable delivery and quality can only be guaranteed if the production administration (ERP) is fully automated. Orders are tracked from start to finish using a barcode system. This makes it possible to adjust the production process and to keep you informed with up-to-date information about the order status. A report generator is used to retrieve every type of information from the system and we are constantly abreast of progress and possible bottle-necks.
